DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The IDS filed 2/7/06 has been considered and recorded in the file.

Allowable Subject Matter

3. Claims 20-38 are allowed.

Regarding claims 20 and 35, Lavean (US 6,141,332) cited by EP Patent Office teaches synchronizing between a base station and a mobile station in a CDMA system, in which the synchronization of the mobile station pilot signal and the base station reference pilot is acquired (col. 4, lines 25-55 and col. 8, lines 41-56). Furukawa (US 7,242,959) teaches that each base station measures intensities of pilot signals and interference signals received from adjacent cells for handover and admission control (col. 3, lines 3-15). Lavean and Furukawa, either alone or in combination, fails to teach receiving at the base station pilot signals from the mobile stations assigned to the base station and pilot signals from mobile stations assigned to adjacent radio cells; and using the pilot signals received to determine a synchronization value for a time synchronization and/or a frequency synchronization, to which the base station synchronizes itself.
